Elementary School
The standards for Kindergarten through grade 5 are arranged by grade level and can be downloaded using the following links: [Kindergarten](#), [Grade 1](#), [Grade 2](#), [Grade 3](#), [Grade 4](#), and [Grade 5](#).

Middle School
The Discipline Specific Course Map has a concentration of earth and space science standards in grade 6, a concentration of life science standards in grade 7, and a concentration of physical science standards in grade 8.

The Integrated Course Map bundles standards together, promoting coherence in the flow of the middle school science standards sequence. Bundling standards together helps students see connections between concepts and can allow more efficient use of instructional time.

High School
The Discipline Specific Course Map contains standards grouped in the traditional disciplines of Biology, Physics, and Chemistry. Each course contains related earth and space science standards to ensure that all high school standards are addressed within the three courses. The courses may be taken in any sequence.

The Integrated Course Map bundles standards together, encompassing a natural progression with increasing rigor of the high school science standards.
